Sketch Engine JSON API Documentation

In this section, you can find instructions on how to manipulate with the Sketch Engine JSON API and a description of all available Sketch Engine methods and attributes (i.e. it is addressed mainly to programmers).

The communication with the Sketch Engine through the use of CGI queries consists of the following steps:

1. create an authenticated connection to the Sketch Engine
2. create a query that you want to work with
3. process the output that is sent as a response

Each of the steps is described in a separate section and accompanied with a simple examples in Java and Python.
